*Improves
Skin Health*

*Speeds Up
Wound Healing*

*Reduces Pain
Acute & Chronic*

*Helps Reduce
SAD Symptoms*

The Green 264 Body Pad utilizes Green and Near-Infrared (NIR) LEDs and is the largest pad in the Inlight collection, delivering versatile applications for individuals seeking the therapeutic benefits of photobiomodulation (PBM) therapy. Designed for optimal comfort and extensive coverage, this pad is a preferred favorite for applying to a maximum range of body surfaces.

Therapeutic Effects of PBM: This nonthermal process yields therapeutic benefits, including pain relief (acute and chronic), improved circulation, inflammation reduction, facilitation of wound healing, improved skin health (especially inflammatory conditions), tissue regeneration, and helps reduce Seasonal Affective Disorder (SAD) symptoms.
